

KOPERNIK GLOBAL REAL ASSET

December 31, 2017

INVESTMENT APPROACH

Kopernik's investment philosophy is centered on the belief that market inefficiencies present numerous opportunities to identify quality businesses that we believe are mispriced. The Firm utilizes bottom-up fundamental analysis to gain a thorough understanding of a company's business and valuation.

The Kopernik Global Real Asset strategy intends to predominantly invest in long positions in equity investments and other securities, including U.S. and international equities and fixed income securities. The strategy also intends to invest in Real Asset Companies located throughout the world, including emerging and frontier markets, which the Investment Manager believes are trading at a significant discount to risk-adjusted intrinsic value. Real Asset Companies include: (i) companies in the energy, industrials, materials and utilities sectors; (ii) companies in the food products industry; (iii) companies, if not in one of these sectors or industries, that (a) derive at least 50% of their revenues or profits from owning, producing, refining, processing, transporting or marketing natural resources or (b) have at least 50% of the fair market value of their assets invested in natural resources; or (iv) pooled investment vehicles that primarily invest in the foregoing companies or that are otherwise designed primarily to provide investment exposure to natural resources. The strategy plans to typically invest in equity securities but may invest in any level of the capital structure that Kopernik perceives to offer the best potential risk-adjusted returns.

PORTFOLIO MANAGERS

Dave Iben, CFA | Co-Portfolio Manager

Portfolio Manager since inception. David (Dave) Iben is the Chief Investment Officer, Managing Member, Founder and Chairman of the Board of Governors of Kopernik Global Investors. PORTFOLIO SECTOR WEIGHTS*

PORTFOLIO REGION WEIGHTS*

*Does not include fixed income which as of December 31, 2017 was approximately 3.75% of the portfolio.

Portfolio weights, regions and characteristics above are based on the holdings of a model portfolio as of December 31, 2017. Portfolio characteristics, sector and region designations are calculated using data from Bloomberg.

Harmonic weighted average is a method of calculating an average value that lessens the impact of large outliers. Weighted average is a method of calculating an average in which each value is assigned a weight.

IMPORTANT INFORMATION

The material herein is not an offer to sell or a solicitation of an offer to purchase securities of any kind.

This report may contain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements involve inherent risks and uncertainties, and we might not be able to achieve the predictions, forecasts, projections and other outcomes we may describe or imply. A number of important factors could cause results to differ materially from the plans, objectives, expectations, estimates and intentions we express in these forward-looking statements. We do not intend to update these forward-looking statements except as may be required by applicable laws. Forward-looking statements are not guarantees of future performance and are subject to risks, uncertainties and other factors, some of which are beyond our control and are difficult to predict. As a result, actual results could differ materially from those expressed, implied or forecasted in the forward-looking statements.

Please consider all risks carefully before investing. An investment in the Kopernik Global Real Asset Fund LP, or any other vehicle using the same strategy, is subject to many risks including sudden changes in general market valuations and market liquidity. Investments in small and mid-capitalization companies also tend to involve greater risk and portfolio price volatility than investments in larger capitalization stocks. Further, investing in non-U.S. markets, including emerging and frontier markets, involves certain additional risks, including potential currency fluctuations and capital controls, restrictions on foreign investments, less governmental supervision and regulation, less liquidity, less disclosure, and the potential for higher market volatility, share expropriation, confiscatory taxation, and social, economic and political instability. Further, investments in energy and other natural resources companies tend to be greatly impacted by developments in global commodities markets, which can be more volatile than equity markets.

The information presented herein is confidential and proprietary to Kopernik Global Investors, LLC. This material is not to be reproduced in whole or in part or used for any purpose except as authorized by Kopernik Global Investors, LLC.
